WAX ON. SPEED UP. NOW!

WAXED CHAINS.
HOT WAX.
LIQUID WAX.

MADE IN GERMANY
SINCE 1893

LESS MAINTENANCE.

Cleaner. Faster. Further. With waxed chains.

MORE FUN.

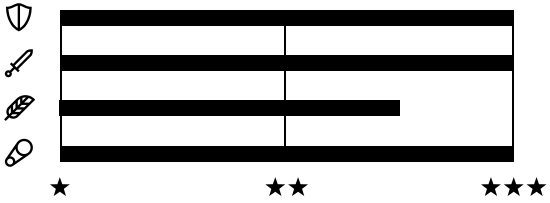

Dirty, oil-covered chains and black fingers after every ride – sound familiar? With our WAX system, that's a thing of the past. The wax creates a dry, clean protective layer that repels dirt, reduces wear, and ensures a noticeably smoother, more efficient drivetrain – mile after mile.

Hot Wax and Liquid Wax work hand in hand to keep your chain performing at its best over time. Hot Wax provides a deep, long-lasting base treatment with protection for up to 500 km, while Liquid Wax is perfect for quick maintenance on the go or between applications. A cleaner drivetrain, less maintenance – and more time to ride.

13SR WAX

Hot-waxed for reduced wear and precisely engineered for outstanding shifting performance – with the 13SR WAX, you'll get the most out of your SRAM Flattop drivetrain.

POWER CHART

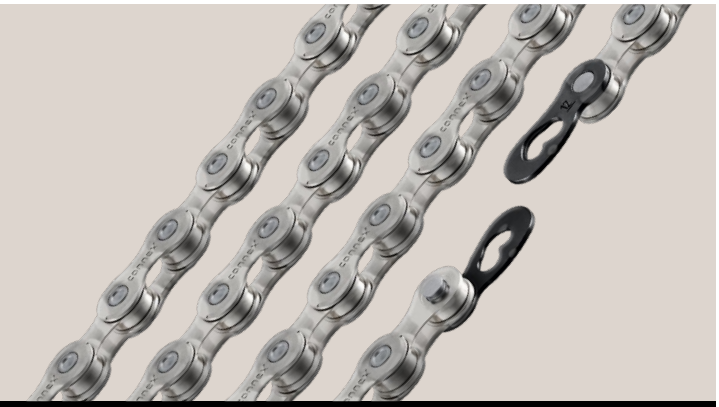

· SRAM Flattop compatible
· Nickel
· 126 links / 285 grams
· Connex Link Black included

PREMIUM HOT **WAX**

READY FOR **E-BIKE**

· For all 12-speed systems (except SRAM Flattop)
· Nickel
· 118 links / 268 grams, 126 links / 285 grams
· Connex Link Black included

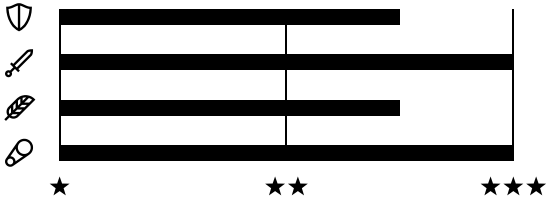

PREMIUM HOT **WAX**

READY FOR **E-BIKE**

12WAX

Technically designed for maximum athletic performance, the waxed version of this chain further improves shifting performance and power transmission. In addition, the protective wax coating minimizes wear and keeps the chain clean.

POWER CHART

· For all 12-speed systems (except SRAM Flattop)
· Black Coating, Brass
· 126 links / 285 grams
· Connex Link Gold included

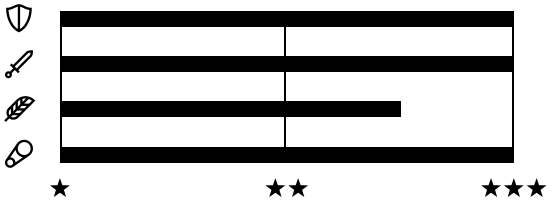

PREMIUM HOT **WAX**

READY FOR **E-BIKE**

12SB WAX

Our expertise from the industrial sector, transferred to your sporting activities with modern 12-speed rear derailleurs: the waxed chain combines a deep black coating with gold pins.

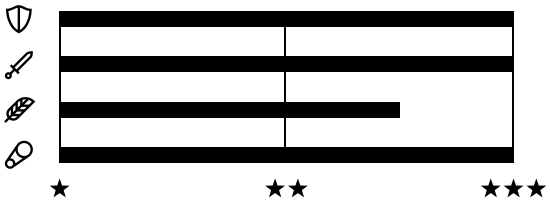

POWER CHART

12SG WAX

A real highlight in terms of both technology and appearance: the 12SG WAX is a gold-colored, waxed 12-speed bicycle chain for sporty use on road bikes and MTBs.

POWER CHART

· For all 12-speed systems (except SRAM Flattop)
· Brass
· 126 links / 285 grams
· Connex Link Gold included

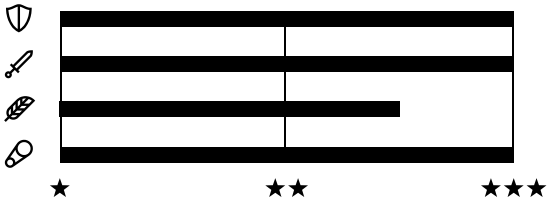

PREMIUM HOT **WAX**

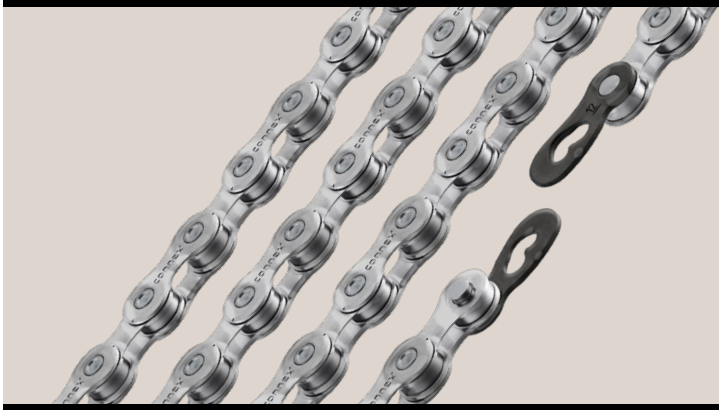

READY FOR **E-BIKE**

12SR WAX

Do you ride SRAM and are looking for a real alternative to flat-top chains? The Connex 12SR WAX has been precisely developed for modern 12-speed flat-top drivetrains and is now also available hot-waxed.

POWER CHART

· SRAM Flattop compatible
· Nickel
· 126 links / 285 grams
· Connex Link Black included

PREMIUM HOT **WAX**

READY FOR **E-BIKE**

· For all 11-speed systems (except SRAM Flattop)
· Nickel
· 118 links / 268 grams, 126 links / 285 grams
· Connex Link Black included

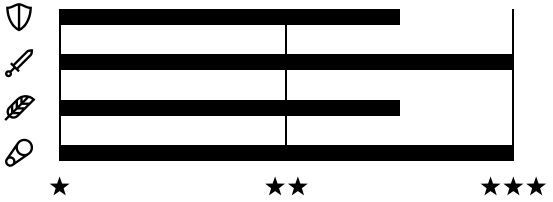

PREMIUM HOT **WAX**

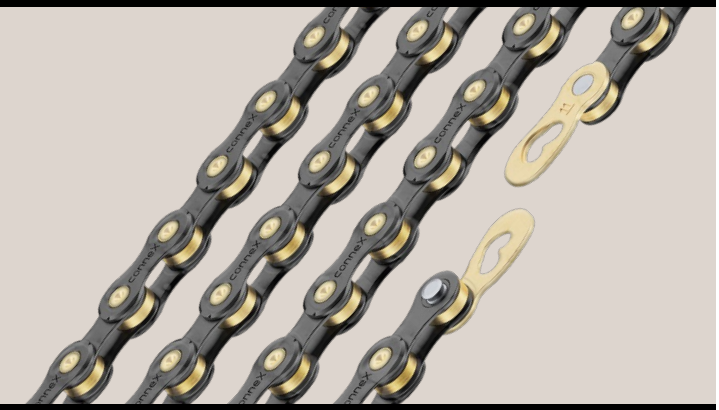

READY FOR **E-BIKE**

11WAX

The waxed version of our high-performance chain is not only impressive in terms of wear and maintenance. It also excels in shifting performance and power output on all types of bikes and derailleur systems.

POWER CHART

· For all 11-speed systems (except SRAM Flattop)
· Black Coating, Brass
· 126 links / 285 grams
· Connex Link Gold included

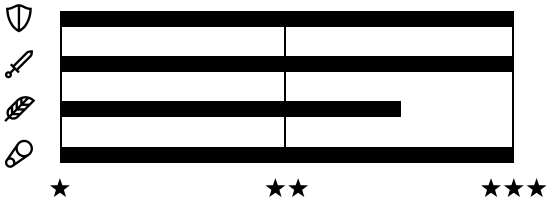

PREMIUM HOT **WAX**

READY FOR **E-BIKE**

11SB WAX

Black, strong, extremely durable – now waxed and 100% industry-proven. Ultra-Black Coating – proven thousands of times in the industrial sector – optimal corrosion protection.

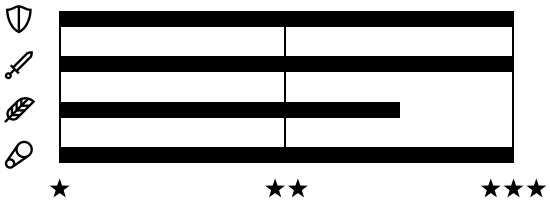

POWER CHART

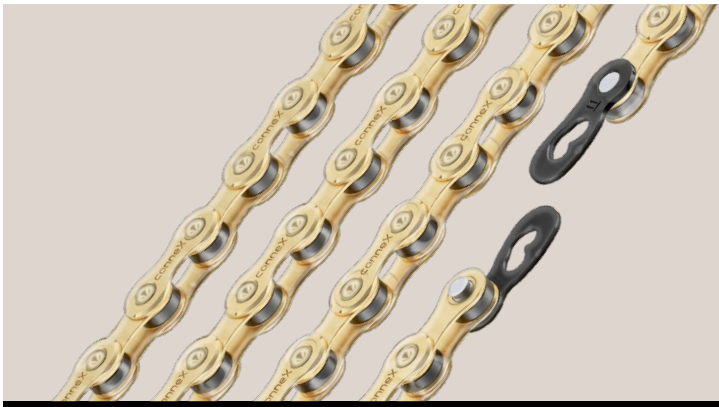

11SG WAX

The combination of high-quality brass coating and chain wax results in an elegant look and the highest degree of cleanliness.

POWER CHART

· For all 11-speed systems (except SRAM Flattop)
· Brass
· 126 links / 285 grams
· Connex Link Gold included

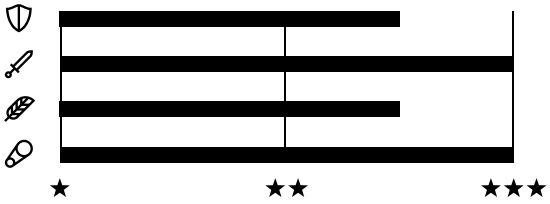

PREMIUM HOT **WAX**

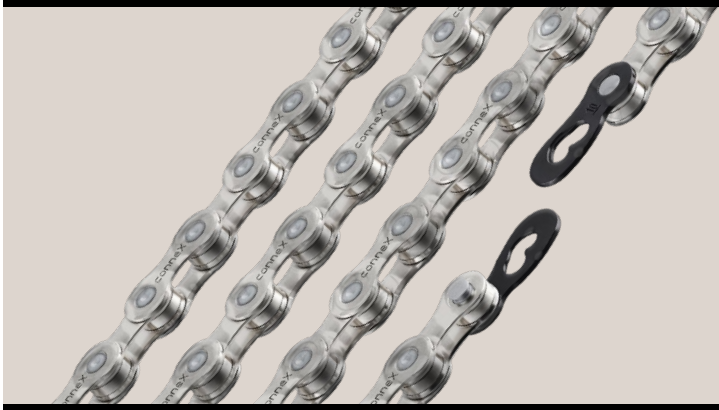

READY FOR **E-BIKE**

10WAX

Robust design combined with our high-performance wax guarantees maximum riding enjoyment through smooth shifting and optimum power transmission. In addition, this chain is extremely wear resistant and easy to maintain.

POWER CHART

· For all 10-speed systems
· Nickel
· 116 links / 268 grams
· Connex Link Black included

PREMIUM HOT **WAX**

READY FOR **E-BIKE**

- With SCA anti-wear additives
- Content: 100ml – PTFE-free
- Minimizes dirt adhesion and wear, with noise-reducing effect
- Ideal for relubricating hot-waxed chains

HOT WAX
COMPATIBLE

LIQUID WAX

Our liquid wax in the 100 ml dispenser bottle is the quick and mobile solution that makes the maintenance of your chain particularly easy – just like any other lubricant. Compatible with all Connex WAX products.

- With SCA anti-wear additives
- Content: 375 ± 5 grams – PTFE-free
- Minimizes dirt adhesion and wear, with noise-reducing effect
- Multiple use

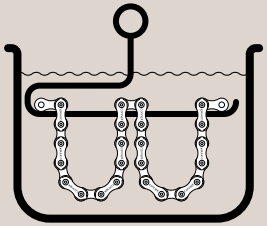

LIQUID WAX
COMPATIBLE

HOT WAX

Our Hot Wax provides a thorough cleaning and builds a dry, dirt-resistant wax layer that effectively protects your chain for up to 500 km thanks to the high-quality SCA anti-wear additives. Compatible with all our waxed chains and with Liquid Wax.

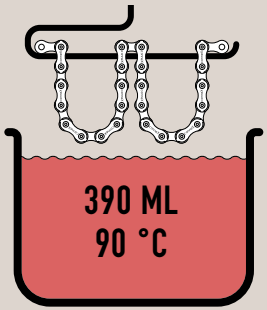

HOT WAX

HOW TO

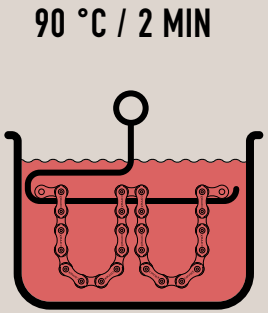

01

Degrease conventionally lubricated chain. Repeat, if necessary. Observe warnings for degreasing agents!

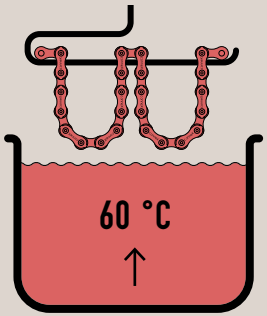

02

Allow chain to dry thoroughly. Heat wax to 90 °C. Do not heat above 100 °C!

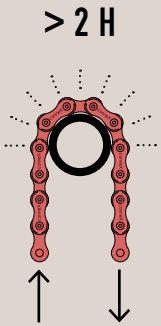

03

Immerse the chain, allowing 2 minutes of exposure at exactly 90 °C after thermal equalization. Reduce temperature to 60 °C until slight skin formation is visible.

04

Remove the chain from the wax. Drain and allow to cool over the wax bath.

05

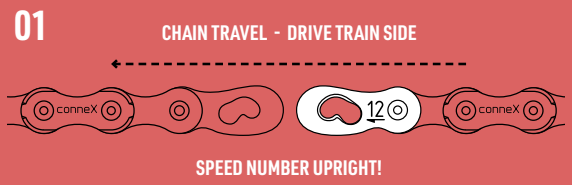

Allow the waxed chain to cool for at least 2 h, then break the wax on each chain link.

More information and products

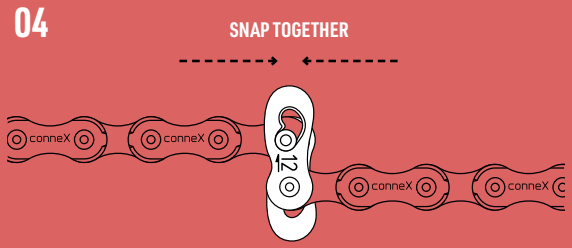

SO SIMPLE

Whether for maintenance or for changing the chain – the Connex Link is easy to open and close without any tools!

Over 15 years ago, we invented the legendary Connex Link and to date, there has been no other connector, which can be assembled and disassembled more easily.

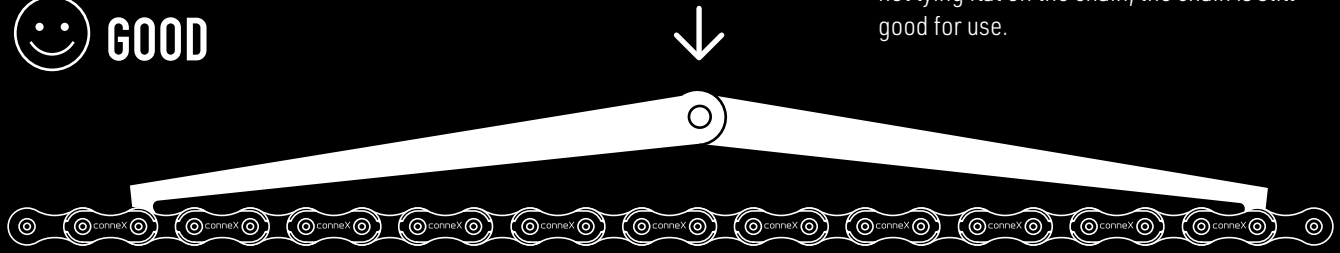

Assembly couldn't be easier: Just insert one half of the Connex Link from the front side into the end of the chain that comes from the crankset. Make sure that the embossed number is the right way up. Place the other half from behind in the end of the chain that comes from the derailleur. All you have to do now is to insert the pins from each link into the corresponding receiving holes on the opposite link. There is no need to close the chain firmly. The tension of the chain will securely fasten the link – 100 %.

EXACTLY
MEASURE WEAR ACCURATELY

With the chain wear indicator from Connex, you can see at a glance if the chain needs to be replaced or is still good for further use. The long sides of the tool ensure extremely accurate results. Just position the chain wear indicator on the chain so that the hook on the left drops into a gap between two rollers. Then place the right side of the indicator on top of the chain.

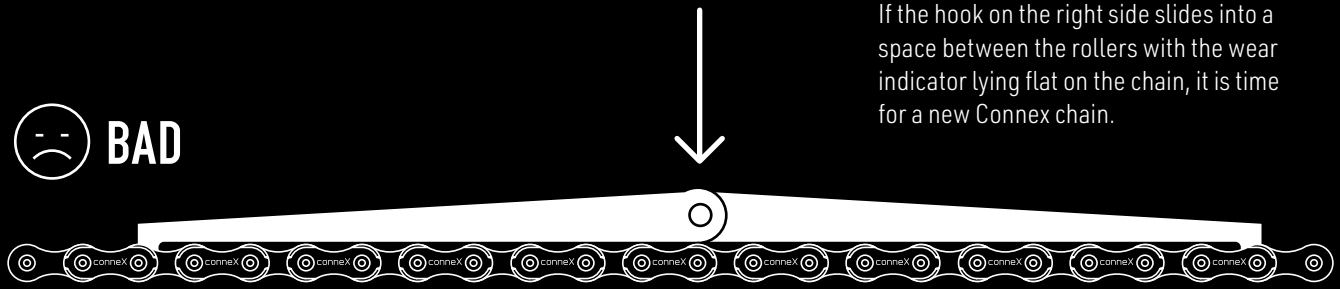

GOOD

If the hook on the right slides into a space between the rollers with the wear indicator not lying flat on the chain, the chain is still good for use.

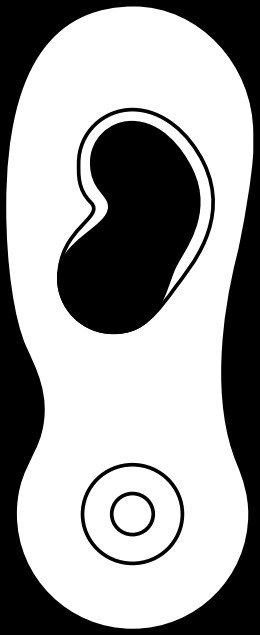

BAD

If the hook on the right side slides into a space between the rollers with the wear indicator lying flat on the chain, it is time for a new Connex chain.
